

Mathematical Symbols

Javad M Alizadeh

1 Introduction

This document will include some math.

1.1 Math Formulas

Mathematical equations can be created inline as $5 * 4 = 20$, and can include a number of different math symbols, such as $7 \leq 10$ is true.

You can also put your equation on a separate line as

$$5^2 = 25$$

to call out the formula.

1.2 Float: Equation

My first result is shown in Equation 1, which shows the number of minutes in a day.

$$24 * 60 = 1,440 \tag{1}$$

There are a lot of interesting math symbols that I can learn, as shown in Equation 2.

$$7^4 + 6 * 17 \geq 13 \cup X_{\alpha} 13 \exists \rightarrow \textit{nonsense} \tag{2}$$

2 Complicated Equation

$$\cos x = \sum_{n=0}^{\infty} \frac{(ix)^{2n}}{(2n)!} \tag{3}$$
